

Citrus Foliar Crop Program

Analysis

	Copper as Cuprous Oxide	Zinc as Zinc Oxide	Manganese as Manganese Carbonate
Verno Copper + Zinc	300g/kg	300g/kg	-
Verno Manganese	-	-	340g/kg
Nordox 750WG Copper Fungicide	750g/kg	-	-

- Water dispersible granule formulation for free flowing ease of handling and low dust.
- Verno foliar fertilisers can be mixed in any ratio for the desired balance of copper, zinc and manganese.
- Verno Micronutrients and Nordox 750WG are certified for organic production.
- Verno foliar fertilisers are compatible with Nordox 750WG Copper fungicide and a wide range of insecticides, fungicides and foliar fertilisers when the spray solution is above pH 6.0.

Foliar applied fertiliser for the correction of micronutrient deficiencies.

Verno contains micronised particles which adhere strongly to plant surfaces, providing a reservoir of slow release micronutrients that are readily available to the plant.

Verno dispersing in water

Application

- Apply Verno @ 250g - 500g/ha as a dilute spray in a minimum of 1500L/ha water. This rate applies to a single Verno product or a combination of Verno products, depending on crop requirements.
- Multiple low rate applications to cover new growth flushes are most effective. Optimum timing is pre-flowering and spring applications.
- Nordox controls various citrus diseases. Please refer to the Nordox 750WG fungicide label for directions of use.

Mixing Instructions

- Fill the spray tank to 3/4 with water, then add the required amount of Verno granules to the tank with continuous vigorous agitation.
 - Completely disperse the granules in the spray tank before adding any other mixing partners.
 - Continuous vigorous agitation is required to maintain suspension of the micronised particles.
 - Do not mix with other products prior to complete suspension. Mixing with other products is not recommended unless the compatibility is confirmed by the manufacturer of that product.
 - Completely flush tank and lines immediately after use.
-
- When applying mixtures of Verno products, the suggested rate and concentration applies to the total of the combined products. Care should be taken to not exceed the maximum rate and concentration for application at that growth stage.
 - Constant agitation is required to maintain Verno in suspension.
