

Winter Cropping Tech Sheet

Analysis

	Copper as Cuprous Oxide	Zinc as Zinc Oxide	Manganese as Manganese Carbonate
Verno Copper	750g/kg	-	-
Verno Copper + Zinc	300g/kg	300g/kg	-
Verno Manganese	-	-	340g/kg
Verno Zinc	-	600g/kg	-
Verno Trio	150g/kg	150g/kg	160g/kg

- Water dispersible for foliar and soil application.
- Verno granules are easy to measure and free flowing with low dust.
- Increase plant tissue nutrient levels to improve vigour and plant health.
- All Verno products are compatible with each other and can be blended to achieve the right balance of micronutrients. The products are also compatible with a wide range of fungicides, insecticides, herbicides and fertilisers when the spray solution is above pH6.0.

Mixing Instructions

- Fill the spray tank to 3/4 with water, then add the required amount of Verno granules to the tank with continuous vigorous agitation.
- Completely disperse the granules in the spray tank before adding any other mixing partners.
- Continuous vigorous agitation is required to maintain suspension of the micronised particles.
- Do not mix with other products prior to complete suspension. Mixing with other products is not recommended unless the compatibility is confirmed by the manufacturer of that product.
- Completely flush tank and lines immediately after use.

Foliar applied fertiliser for the correction of micronutrient deficiencies.

Verno contains micronised particles which adhere strongly to plant surfaces, providing a reservoir of slow release micronutrients that are readily available to the plant.

Verno Winter Crop Application Guide

	Foliar Rate		
	Cereals	Legumes	Canola
Verno Copper	50-200g/ha	50-200g/ha	50-200g/ha
Verno Copper + Zinc	100-500g/ha	100-500g/ha	100-500g/ha
Verno Manganese	100-500g/h	250g-1kg/ha	100-500g/ha
Verno Zinc	50-500g/ha	100-500g/ha	100-500g/ha
Verno Trio	200g-1kg/ha	200g-1kg/ha	200g-1kg/ha
Timing	4Leaf (BBCH 14) through until flag leaf sheath opening (BBCH 39)	Multiple low rate applications commencing (BBCH 12) 5cm are most effective	4Leaf (BBCH 14) through until flowerbuds present (BBCH 50)

- Maximum 5g/L spray tank concentration. The recommended concentration applies to a single Verno product or a combination of Verno products.

Application at Sowing

- Verno is suitable for applying “down the tube” with UAN liquid fertiliser when sowing.
- Liquid nitrogen fertiliser needs a minimum of 5% dilution with water before the addition of Verno.
- Constant agitation is required to maintain Verno in suspension.
